SALES INSIGHTS & RECOMMENDATIONS

1. Sales Performance

Sales fluctuated throughout the reporting period, with noticeable peaks and declines.
Some days recorded exceptionally suggesting increased customer demand or promotional activity.
Sales generally increased when more units were sold.

2. Quantity Sold

Higher quantities sold were associated with higher daily sales revenue.
Some periods experienced a significant increase in units sold, indicating strong customer demand.
Changes in quantity sold may have been influenced by pricing or promotional campaigns.

3. Pricing Insights

The sales price unit varied over time, showing changes in the product's selling price.
Lower selling prices often coincided with higher quantities sold, suggesting customers responded positively to price reductions.
Monitoring price fluctuations can help identify effective pricing strategies.

4. Profitability Insights

Gross profit varied from day to day, reflecting changes in both sales revenue and cost of sales.
Some trading days recorded negative gross profit, meaning the cost of sales exceeded revenue.

5. Time Based Insights

Sales performance changed across different periods, indicating seasonal or monthly trends.
Certain days generate stronger sales than others.
Analyzing sales by month and day of the week can improve forecasting and resource allocation
